## \$ Profile

Junior IT administrator with hands-on experience running and securing infrastructure for a portfolio of client companies. I work daily with **FortiGate firewalls**, network segmentation, VPNs and log analysis, and I am frequently the first responder to security events — triage, impact assessment and remediation. I am deliberately moving my career toward **security operations**, building on network fundamentals (CCNA), Fortinet technologies and my own homelab. I work independently, see problems through to resolution, and keep learning through certifications and practical labs.

## \$ Experience

### Junior IT Administrator — Ekvia s.r.o.

12/2025 – present

*Small IT team providing infrastructure and security services to multiple client companies.*

- Administration and configuration of **Fortinet** infrastructure — FortiGate firewalls and FortiSwitches: security policies, VPN tunnels and network segmentation into VLANs.
- First responder for security incidents** across the client portfolio — event triage, analysis, impact assessment and remediation.
- Log analysis across firewalls, servers and endpoints; identifying anomalies and potential risks before they escalate.
- Email security — deployment and tuning of **SPF, DKIM and DMARC** records.
- Administration of approximately **10 virtual Windows servers**, Active Directory and Microsoft 365 (user accounts, access, cloud services).
- Operation and monitoring of backups in **Veeam Backup & Replication** — verifying job success and data recoverability.
- Deployment and management of **Docker** containers; running both Windows and Linux systems.
- Design and development of **internal tools and automations** that enabled the company to meet European regulatory requirements.
- End-user technical support and resolution of infrastructure issues.

### Co-founder & Team Lead — Incomodum

09/2020 – present

- Led the team designing and delivering digital products **from prototype to production deployment**.
- Development on a **government project for MIRRI SR** (navody.slovensko.sk) — delivering a public service to public-sector standards.
- Led the team at **5 winning hackathons** (Hacknime.to) — designing and defending solutions under time pressure.
- Client communication, presenting technical solutions to juries and investors, and organising the team's work.

### UI/UX Consultant — Košice Self-Governing Region

02/2025 – 11/2025

- Review of the regional development portal and **verification of the supplier's deliverables** against the client brief and public-sector standards.
- Worked with the supplier on optimising user journeys, information architecture and accessibility.

- Built web applications for clients across sectors (e-commerce, services, startups) in Next.js, React and Vue.js.
- Frontend integration with **backend APIs**, including authentication and session handling — understanding how web applications are built now informs how I assess their security risks.
- Worked in an agile development team; designed and maintained a consistent design system.

## \$ Certifications

|                                             |                 |
|---------------------------------------------|-----------------|
| Cisco CCNA — Routing and Switching          | [ certified ]   |
| Fortinet NSE 3 — Network Security Associate | [ certified ]   |
| CompTIA Security+                           | [ in progress ] |

## \$ Technical skills

|                 |                                                                                                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Security        | Incident response, security monitoring, log analysis, threat hunting fundamentals, vulnerability management, firewall administration, email security (SPF, DKIM, DMARC), VPN technologies |
| Networking      | TCP/IP, routing & switching, VLAN segmentation, DHCP, DNS, firewalling, FortiGate, FortiSwitch                                                                                            |
| Systems & infra | Windows Server, Active Directory, Microsoft 365, Linux, NixOS, Docker, virtualisation, Veeam Backup & Replication                                                                         |
| Automation      | Python, Bash scripting, internal tooling                                                                                                                                                  |
| Development     | JavaScript (ES6+), React, Next.js, Vue.js, HTML5, REST APIs                                                                                                                               |

## \$ Hands-on security training

- **TryHackMe** — network and defensive security, incident response, enumeration, privilege escalation and system analysis.
- **Homelab** — self-built test environments for networking, Linux, Docker and security tooling; used to validate configurations and rehearse procedures before applying them in production.

## \$ Projects

### ThinkPad T420 + Coreboot firmware, NixOS, low-level

Flashed the open-source **Coreboot** BIOS, including hardware modifications beyond the manufacturer's original configuration, and run **NixOS** on the machine. Hands-on experience with firmware, Linux and low-level system configuration.

### Automated document processing Python

A tool that downloaded over **900 images** from a web source and merged them automatically into a single PDF — batch data processing and error handling.

### Bazoš listings analyser Python, scraping

Tool that automatically retrieves classified listings, parses data out of the description text, filters the results and exports them to a spreadsheet.

Earlier product and hackathon projects (navody.slovensko.sk, VirtuFest, Športuj Too, Traffi) are at **lucasligas.com**.

## \$ Education

### SPŠE Hálova 16 — Technical Secondary School of Electrical Engineering, Bratislava

09/2021 – 08/2025

Digital Technology Programming — application development, algorithms, object-oriented programming.

### Startup workshop — Georgia Institute of Technology, Atlanta (USA)

10 days

Building a product from idea to launch in an international environment.
